➢ An excellent performer with a strong grasp of technical as well as the customer-oriented managerial processes

➢ Familiarization with various other computer languages like C, C++, J2EE etc.

EDUCATIONAL QUALIFICATIONS

Qualification	Institute/University	Year	CGPA / %
Masters of Computers	California State University, Fullerton	2015	
Bachelors of Computer Science	___	2013	

WORK HISTORY

FOXFIRE TECHNOLOGIES, INDIA   **Aug, 2013 – Sep, 2014**

Developer

Application for providing e-learning at an affordable cost.

The project involved development of a e-learning platform which will provide the education in offices and the schools by facilitating sharing of knowledge through social media. The idea behind the project was to allow the colleagues working in a company to share their knowledge with other colleagues. The web-platform used for the process was Google Web Toolkit. MySQL was used as the database and tomcat server was used to achieve the same.

Role: Developer involved in suggesting the design of the product, back-end development of the application and the front-end application.

Technical Acquaintance

➢ **Language** :   C, C++, Java, J2EE+
➢ **Database**: My SQL 5.0
➢ **Web Interface**: Google Web Toolkit 2.0
➢ **Web Development**: Javascript, HTML, XML, CSS, AJAX
➢ **Operating Systems**: Windows XP.

Resume Reflection

The current resume has been selected keeping the guidelines indicated in Purdue OWL in mind. Following are the major sections selected for creating the resume:

i)   Name and Contact information: The first part of the resume should indicate the name, contact address, contact number and the email contact ID. The same has been covered here. The font selected for the name is slightly larger in size and is bolded so that the same is easily visible.

ii) Career Profile and Objective: This section of the resume expresses the my career objective. The sentence selected clearly expresses what I am currently pursuing and what kind of future I oversee for myself. The idea heading is selected in the darkened grey box and my current education is bolded in the statement so that the person seeing the resume has clear idea about what education I am currently undertaking.

iii) Professional Snapshot: This heading gives a snapshot of my professional skills and achievements. The idea is to give a brief snapshot of my professional history through this paper. Each achievement and skill is expressed using the bullet points. The first point expresses my past experience. The second point expresses what I am currently pursuing. The next point expresses my strength as a developer of the project while the last point expresses the computer language I have mastered.

iv) Educational Qualification: The next section I have decided to highlight is my educational qualification. Starting from the current course I am pursuing, the educational qualification shows the snapshot of my past education. It tells the name of the institute/university from where the course was undertaken along with the GPA or the score obtained in each institute. The year of passing is also indicated in the section.

v) Professional Experience: This section presents the details of the past experience. The section starts with the name of the company and the duration I worked with the company, and then moves on to explain the role played by me in the company. The project I worked on is detailed in the description, along with the role played by me in the development of the project.

The section also expresses the tools and the web-based environment used by me for the development of the project.

vi) Technical Acquaintance: The last section of the resume expresses my technical skills in the field. In computer software, the most important thing for the employers is to know what are the fields and languages the prospective employee is acquainted with and the same is expressed in this section.

A resume is the reflection of the current education and past experience. This resume clearly expresses the both. Each of the heading is selected in an order that they help the interviewer answer all the basic questions about my educational and professional background.
